## **DETAILED ACTION**

### ***Response to Amendment***

Applicant's amendments to the claims, filed 11/2/2007, are accepted by the examiner. Applicant has canceled claims 61 and 65 and amended other claims. In response to applicant's amendments, the following restriction requirement is necessary.

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group A, claim(s) 1-60, drawn to a method and apparatus for calibration of measurement instruments.

Group B, claim(s) 62-64, 66-76, drawn to sets of objects with set chemical and geometrical properties.

The inventions listed as Groups A and B do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Although the intention is for the "stable objects" of group B to be used in the method and apparatus described in group A, the claims in group B are not limited to such. As it stands the claims in group B describe a set of objects that could be used for any number of methods or which perhaps have utility of their own. The groups are related in that group B describes an apparatus and group A describes a process of use of that apparatus. However, as mentioned previously, the specific limitations of the claims in group A do not depend on those of group B and could be realized independently as the methods and apparatus in the claims of group A do not inherently require such a set of objects. The claims of group B, now no longer including the limitations of the method and apparatus for

Art Unit: 2863

instrument calibration, are far broader in scope than before. Claim 66, for instance, cover any set of objects where each has two different chemical compositions and wherein the thickness of the objects is stepped. This greatly broadened scope of subject matter demands a new and widely divergent search on the part of the examiner. As discussed with applicant's representative, it may be possible, in place of an election, for the limitations of (for instance) claims 63 or 66 to be incorporated into claim 1 to further define the "stable objects" described there and to tie these objects in with the invention of group A.

A telephone call was made to Thomas Bilodeau on 1/18/2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
